

IscoLease

The smart solution for temporary equipment needs!

IscoLease stretches tight budgets

The **IscoLease** program is the cost-effective way to get the extra equipment you need for large flow surveys, I&I studies, stormwater and non-point source monitoring, or for any temporary project that requires equipment you don't have in inventory — or don't have in sufficient numbers for the work you need to accomplish.

IscoLease provides a practical alternative to purchasing equipment you can't use full time. With IscoLease, you get only the specific hardware you need for the job at hand — and pay only for the time it's actually in use.

Since **IscoLease** originates directly from our factory, you receive the best rates available, along with fast, personalized service. Our large factory inventory assures timely delivery of first-rate equipment containing the latest upgrades.

IscoLease is simple and fast

Here's all you do:

- ▶ Determine your water monitoring requirements.
- ▶ Contact Isco for help in selecting their equipment.
- ▶ Sign a lease agreement.

Note: A lease/purchase plan is available.

In many cases, equipment can be on-site within 24 hours.

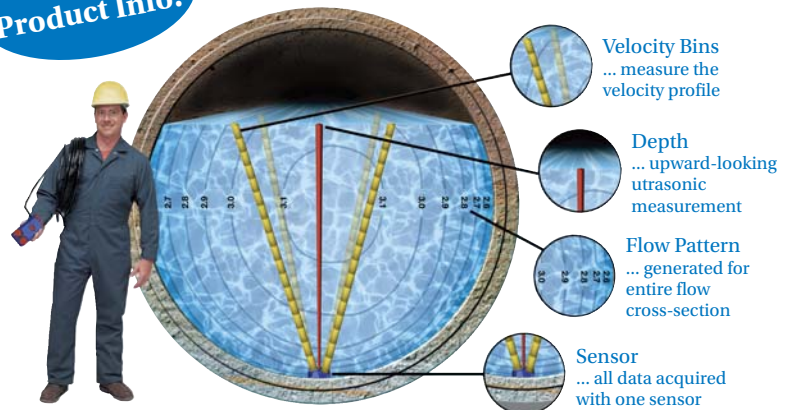

New from **IscoLease!**

ADFM® Velocity Profiling Flow Meters
for large pipes and open channels.

Isco now offers a full line of accurate, sophisticated, pulse-Doppler technology at economical lease rates.
